

Project Performance Test

Date	06 July 2026
Team ID	
Project Name	Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau
Maximum Marks	

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	The dataset contains approximately 1,472 rows(records) and 11 columns(fields) , totalling around 376 KB of data loaded into Tableau as an Excel Worksheet (Cosmetics.xlsx). It includes details such as product names, brands, categories, prices, ranks, and skin types.
2.	Data Preprocessing	The dataset was reviewed before analysis and was found to be clean and well-structured. It contained no missing values, duplicate records, or incorrect data types. Therefore, no additional preprocessing or data cleaning was required before importing it into Tableau.
3.	Utilization of Filters	Multiple interactive filters were applied across the dashboard to enable dynamic exploration of the data. The following filters were implemented: • Category (Label) Filter: Used in the Category Level Product Distribution Analysis (Packed Bubble Chart) to allow users to dynamically select and analyze specific cosmetic categories. • Brand Filter: Applied across multiple visualizations, including Category Level Product Distribution Analysis (Packed Bubble Chart), Top 10 Brands & Cosmetics (Pie Chart), Top 10 Products Count (Bar Chart), and Top 10 Brands Suitable for All Skin Types (Bar Chart). This filter enables users to view and compare the top 10 brands across different charts.

4.	Calculation fields Used	A calculated field named “All Skin Types” was created to determine the total number of products suitable for all skin types. The syntax used is: [Combination] + [Dry] + [Normal] + [Oily] + [Sensitive]
5.	Dashboard design	No of Visualizations / Graphs –A total of 11 visualizations (including 3 KPI cards) were used to design the dashboard. The dashboard, titled "Cosmetics Insights Dashboard", contains the following visualizations: Category Level Product Distribution Analysis: A bubble chart showing the distribution of products across categories like Sun protect, Cleanser, Face Mask, Eye cream, Treatment, and Moisturizer. Category-wise total revenue: A horizontal bar chart showing revenue for Sun protect (7,804), Cleanser (9,161), Face Mask (11,338), Eye cream (13,293), Treatment (19,636), and Moisturizer (20,588). Top 10 products by product count: A horizontal bar chart listing brands like CLINIQUE, SEPHORA C., SHISEIDO, ORIGINS, MURAD, PETER THO., KIEHL'S SIN., FRESH, DR. JART+, and KATE SOME. Top 10 Brands that are suitable for all skin types: A vertical bar chart showing brands like CLINIQUE, FIRST AID BEA., OLEHENRIKSEN, PETER THOMA., and SHISEIDO. Skin Types Count: A KPI card showing counts for various skin types: 4,480 for Sun pr., 1,472 for Total Cosme., and 116 for Brand Count. Brand with their Average pricing: A vertical bar chart showing average prices for brands like BECCA, CLINIQUE, DR. JART+, FOREO, JONE, MOSKOWSKI, MONODOLAR, OMORONICA, SHISEIDO, and TOTAL. Category-wise distribution of Combination Skin products: A bubble chart showing the distribution of products across categories like Moisturizer, Sun protect, Cleanser, Eye cream, Treatment, and Face Mask. Top 10 Brands and cosmetics count: A horizontal bar chart showing counts for brands like SHISEIDO, CLINIQUE, SEPHORA COLLECTION, DR. JART+, PETER THOMAS ROTH, FRESH, ORIGINS, and KIEHL'S SINCE 1851. Price vs Rank: A scatter plot showing the relationship between Price and Rank.
6	Story Design	No of Visualizations / Graphs – A total of 8 story points were used to create the story. The story includes the following analyses: • Category-wise Distribution of Brand Products • Brand and Their Average Pricing • Top 10 Cosmetic Brands • Category-wise Distribution of Combination Skin Products • Category-wise Total Revenue • Top 10 Brands with Distinct Products • Price vs. Rank Analysis • Top 10 Brands Suitable for All Skin Types
